KKL

Emerging Technologies

We advise and defend our emerging technology clients in their most critical regulatory and enforcement matters and business disputes. As new technologies reshape business models and growth strategies, they can present both operational benefits and legal risks. We represent companies and individuals on a wide range of matters arising in connection with new technologies, including criminal enforcement and regulatory scrutiny, as well as disputes involving data privacy, intellectual property, antitrust, employment, products liability, and contracts.

Our agile structure and entrepreneurial mindset make us ideal advisors and partners. We efficiently learn our clients' technologies and business so that we can tailor solutions to their needs, whether that means pursuing resolutions from a position of strength or taking disputes to arbitration or court, through trial and appeal. In a rapidly developing criminal enforcement and regulatory environment, we know whether, how, and when to engage with enforcement and oversight bodies.

KKL brings the experience of five former federal prosecutors. While in government, our partners supervised many of the Department of Justice's most significant investigations into digital assets and initial coin offerings (ICOs), as well as the most sophisticated computer intrusions and data breaches. This knowledge and experience benefits clients in high-stakes civil litigation and complex and impactful crypto enforcement matters brought by the SEC and CFTC. We have also guided companies through cyber-related and data privacy issues that arise before, during, and after a breach or other cybersecurity incident.

Forward-thinking and quick to adapt, we are on the cutting edge of the law, allowing our clients to focus on the business of innovation.
